

Initial Project Allocation Form

Please complete this form and submit to Blackboard by **18th April 2025 before 11.59pm.**

Name:	Rachel Ng Ker Xin
Coventry ID:	15730305
Program:	Bachelor of Science with Honours in Computing 3+0
Project Title:	Development of E-commerce Website for Maison Sakura Bakery
Scope of Project	Development/Research Based Project

Problem Statement:

Problem Statement supported with statistics and journal paper. Please make sure its included with in-text citation.

Maison Sakura Bakery, a small family-owned business, is facing significant challenges in expanding due to limited online visibility, resulting in a loss of potential earnings. According to the research, 22% of homemade bakeries have fully functional e-commerce websites (Journal of Small Business Technology, 2023). Even so, 68% of customers prefer purchasing special baked products online (Food Trends Report, 2024). It is estimated that 30% of possible annual earnings is wasted due to this shortage (Bakery Industry Analysis, 2023).

Manual transaction processing via mobile devices or computers increases the likelihood of input errors and processing delays. Studies have shown that about 45% of small bakeries have experienced order errors without computer technologies (Operations Management Review, 2024). About 60% of customers have cancelled their orders if they have waited at least 2 days for them to be delivered (Consumer Behavior Journal, 2023).

About 75% of customers in the bakery have been searched on mobile devices, and 52% of usual bakery websites have failed the basic standards of mobile responsiveness (Mobile Experience Study, 2024). About 35% of lower conversion rates are directly linked to poor mobile UX (E-Commerce UX Journal, 2023).

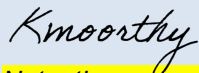

Objectives (hint: must be in point form, must contain action verb and must be measurable) (The number of objectives should be more than 1 and less than or equal to 3)

Example :

1. To (verb) indicate the platform and detailed out the project scope and feature
- 2.

1. To develop a responsive e-commerce website featuring detailed product descriptions, robust search functionality, secure checkout options (including e-wallets and credit cards), and real-time order tracking.
2. To implement a computerised admin dashboard to manage stock, process orders efficiently, and store customer data such as purchase history.
3. To improve website effectiveness by increasing the rates of checkout completions, optimizing page load speed and ensuring full accessibility compliance.

OPTIONAL: ONLY if you have made a prior agreement with a supervisor, enter the name of the supervisor here.

Supervisor's name	R. K. Krishnamoorthy Kumarasamy
Supervisor's signature	 <i>Note: the supervisor has to sign the form in order to acknowledge that they are the supervisor</i>

Comment/Feedback	Seems to be basic e-commerce website with fundamental features and functionalities. Administrative functions can be enhanced with sales reporting and stock / inventory management. To work on the technical details on how objective 3 can be achievable.
